

Do you want to make a difference and take an active role in fighting climate change and shaping the future energy system? Welcome to ATHION! We are an innovative technology company and we have made it our mission to promote the integration of renewable and energy-efficient technologies. We support companies in optimizing their energy management by means of intelligent software and the use of state-of-the-art technology.

To support and grow our team we are looking for a:

Front-End Developer (f/m)

What you'll be doing:

- Design and develop a front-end as part of our innovative software system for energy management of industrial companies
- Participate in our agile scrum process and take care of complex issues
- Develop a Single Page Application with Angular 6
- Design new apis and user interfaces to make life nicer for our users
- Develop the tech road map and strategy with us
- Select, evaluate and deploy new technologies and trends

What we are looking for:

- Minimum BS degree in computer science, engineering or equivalent practical experience
- Prior work experience as a software engineer
- Knowledge of many (or even all?) of the following technologies: Javascript, Angular >= 2, SignalR, Typescript, AMQP, Docker, GIT
- Test-driven development
- Autonomous working style and excellent analytical thinking
- A great team spirit and enthusiasm for working in a dynamic environment

What we have to offer:

- The chance to get on board with a young and growing company
- You are your own boss and can structure your work as you like
- Exciting challenges and a steep learning curve
- Flexible hours and location
- Be part of the digital revolution for industrials
- An open and collaborative environment

Start: immediately or as agreed

Location: Cologne, Berlin, Munich or remote
